M59: Within-Subject Reliability of Pattern Measures

OVERALL RELIABILITY (both conditions pooled)

Measure	n	Pearson r	p	S-B	ICC(2,1)	Verdict
seq_typing_entropy	71	-0.089	0.458	-0.20	-0.09	NEGLIGIBLE
seq_typing_max_run	71	+0.037	0.761	+0.07	+0.04	NEGLIGIBLE
first_writing_time_s	71	+0.277	0.019	+0.43	+0.27	POOR
seq_typing_mean_run_explore	66	-0.000	1.000	-0.00	-0.00	NEGLIGIBLE
seq_topic_mean_run_exploit	71	+0.071	0.555	+0.13	+0.07	NEGLIGIBLE
pasted_chars	71	+0.507	0.000	+0.67	+0.51	GOOD
final_answer_length	71	+0.632	0.000	+0.77	+0.63	GOOD

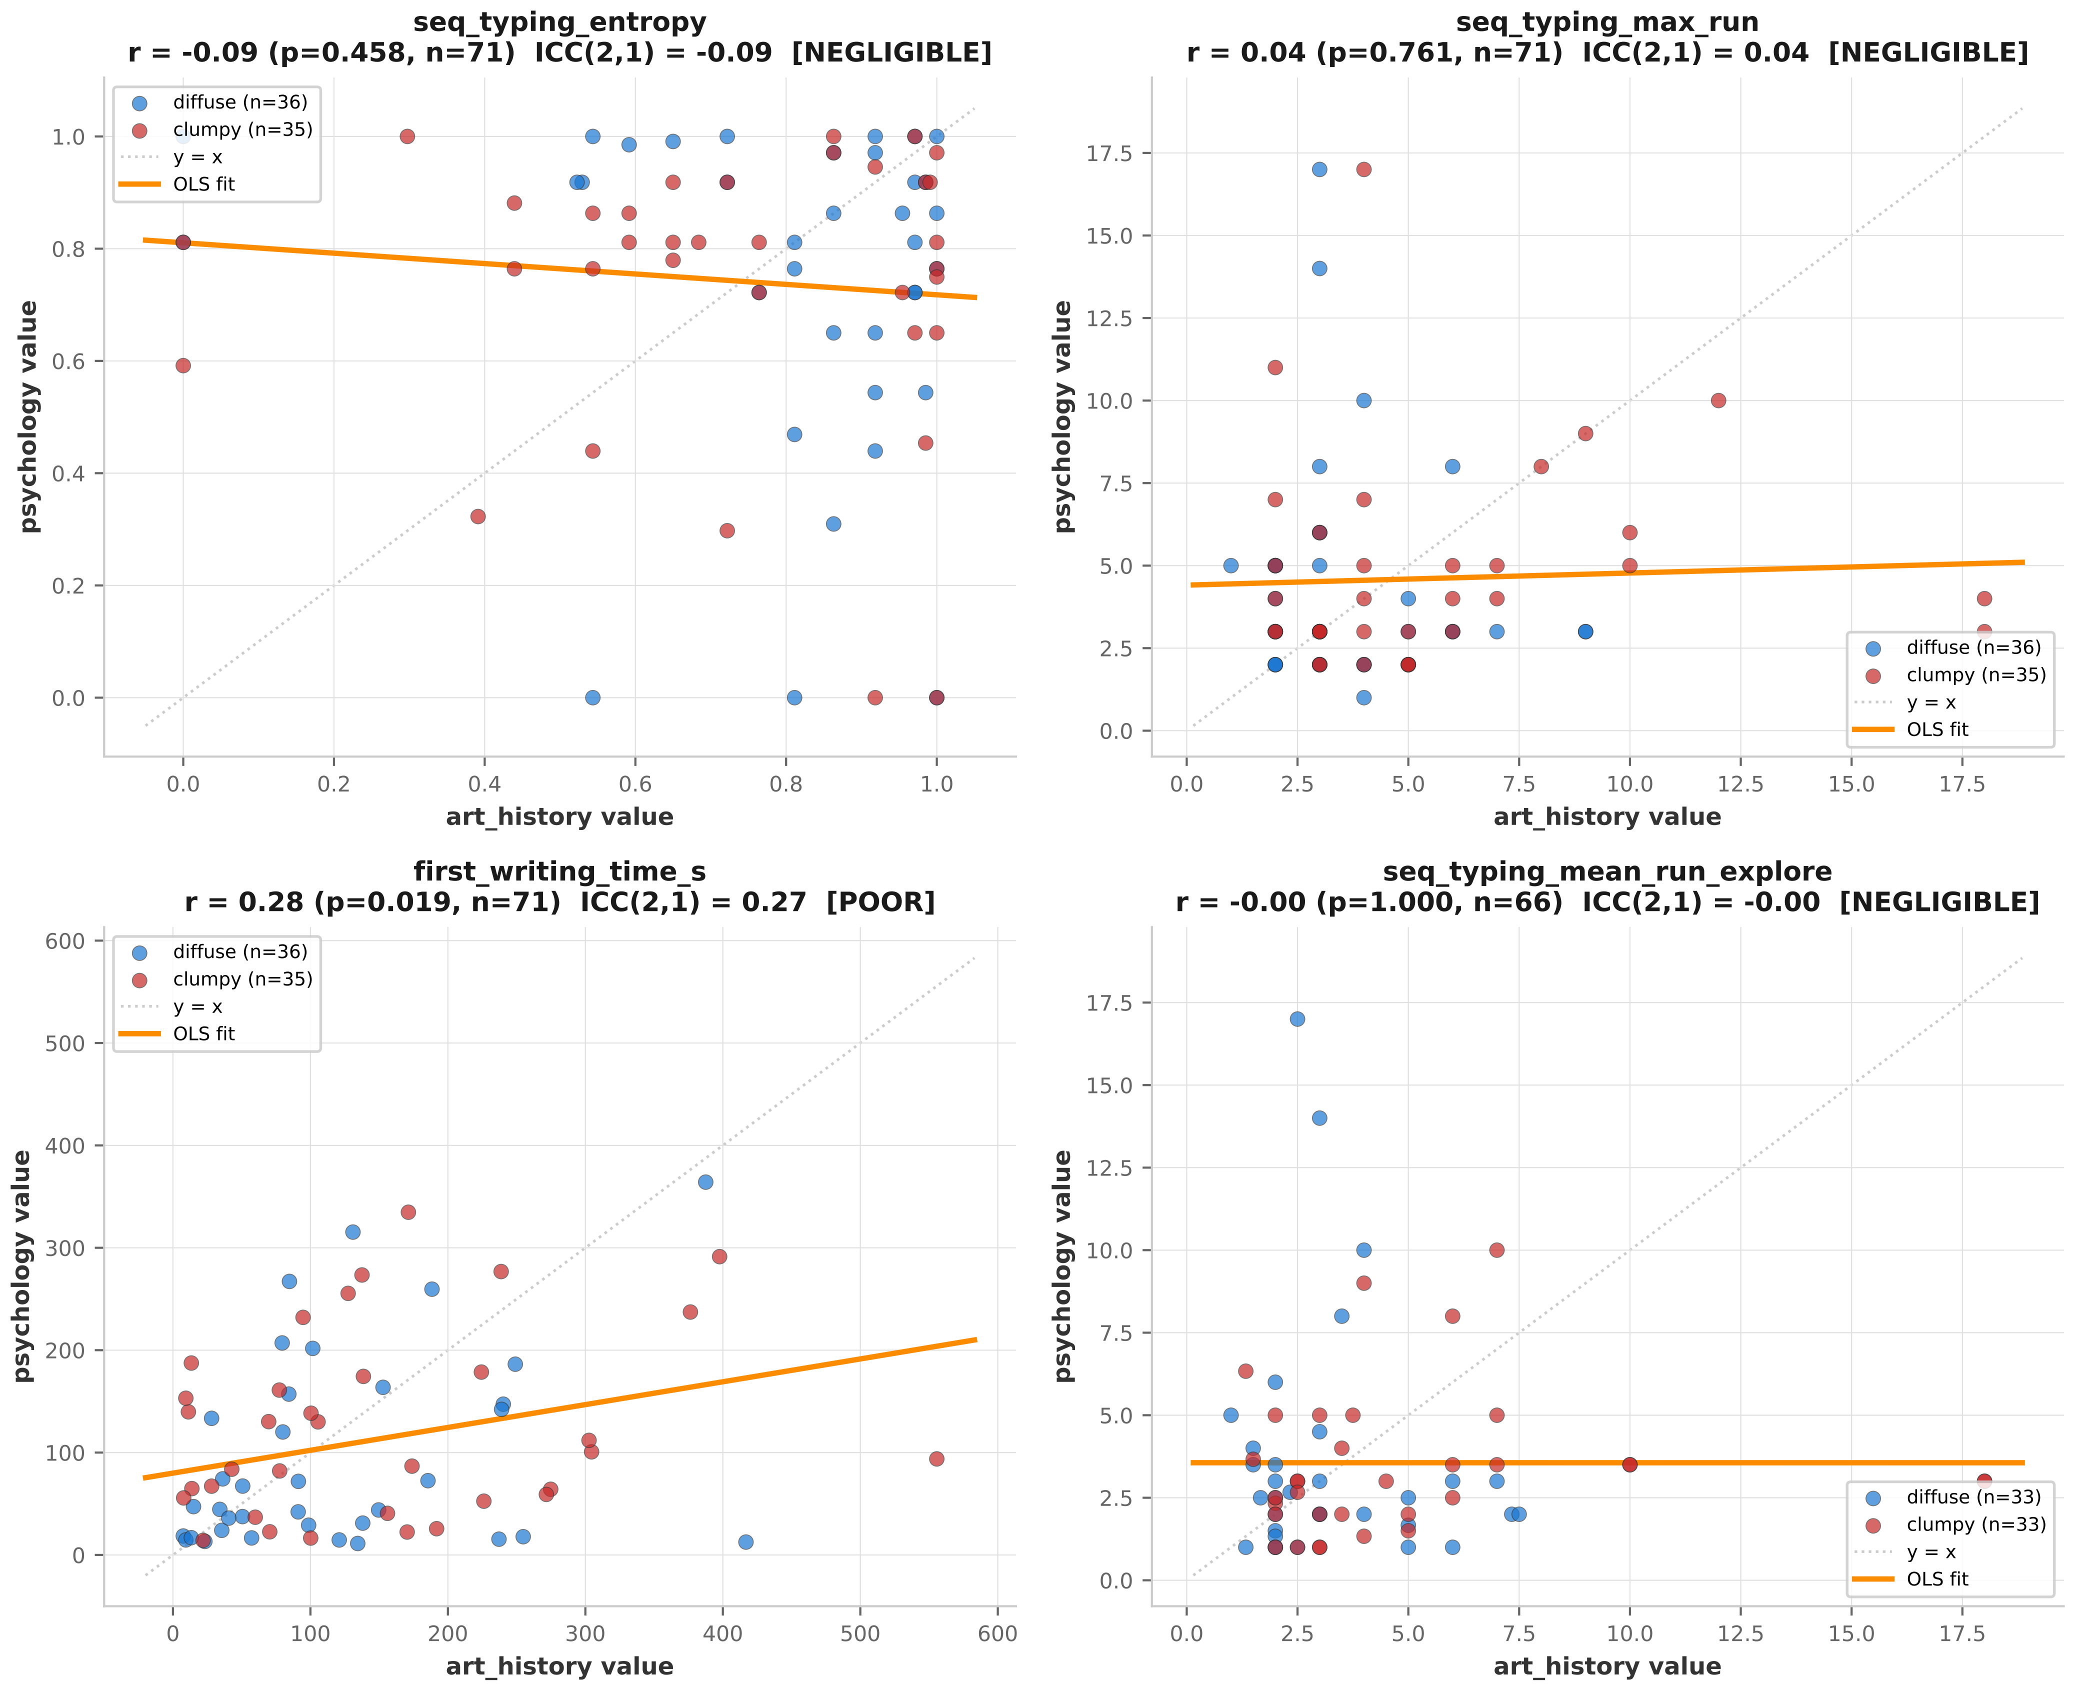
RELIABILITY BY CONDITION (does it differ between groups?)

Measure	Diffuse r	n	Clumpy r	n
seq_typing_entropy	-0.145	36	-0.040	35
seq_typing_max_run	-0.093	36	+0.078	35
first_writing_time_s	+0.329	36	+0.205	35
seq_typing_mean_run_explore	-0.104	33	+0.093	33
seq_topic_mean_run_exploit	-0.142	36	+0.128	35
pasted_chars	+0.268	36	+0.599	35
final_answer_length	+0.351	36	+0.659	35

Interpretation guide:

```
  EXCELLENT  r >= .75 - measure captures a stable trait
  GOOD       r >= .50 - measure has substantial trait variance
  MODERATE   r >= .30 - measure mixes trait and noise
  POOR       r >= .10 - mostly noise, but some signal
  NEGLIGIBLE r < .10  - measure is essentially state/noise
```

Spearman-Brown = reliability of the AVERAGED 2-question score.
ICC(2,1) = treats questions as random raters of the same subject.



seq_typing_entropy
r = -0.09 (p=0.458, n=71) ICC(2,1) = -0.09 [NEGLIGIBLE]
