

Wikipedia task (N = 101): pre-registered analysis null, reading-only streaks show a robust signal

Pre-registered analysis

PC1 of three switch counts (time, topic, typing)

d = +0.04, p = 0.83

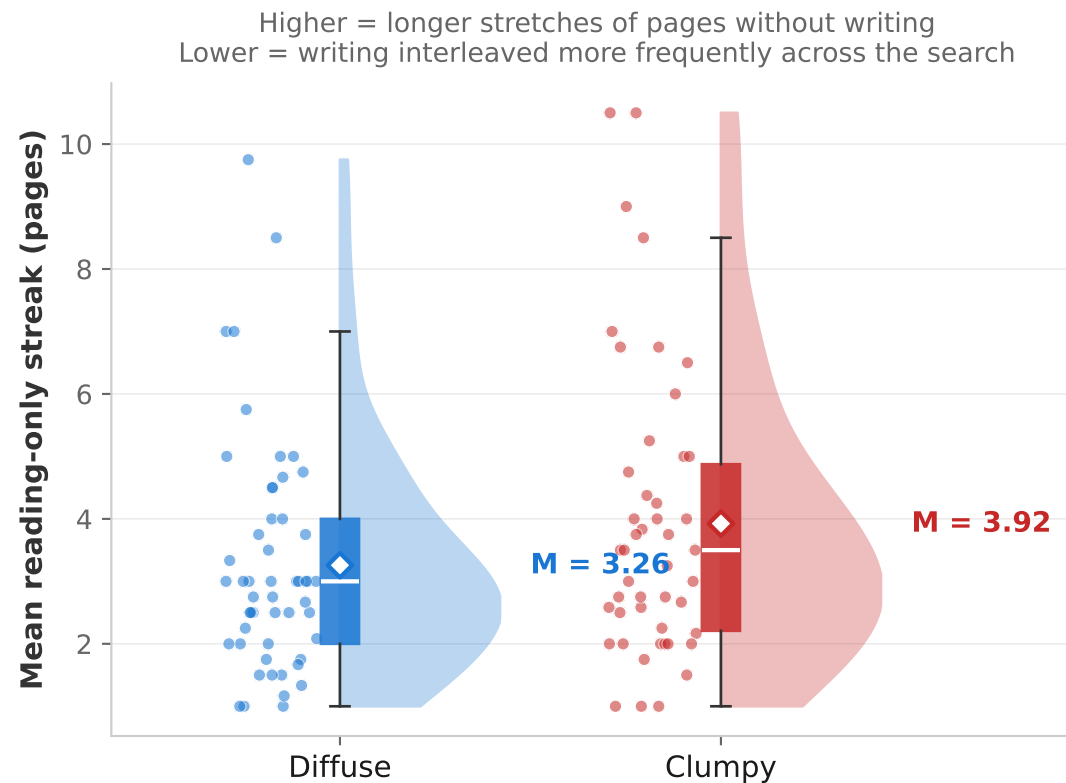

no condition difference

Exploratory finding

Mean reading-only streak

d = -0.44, p = 0.038

Clumpy > Diffuse

The manipulation does not move the pre-registered switch counts,
but it does change HOW writing is distributed across pages:

In Clumpy, the average reading-only stretch is longer - writing concentrates into bursts with longer non-writing gaps.

In Diffuse, writing is interleaved throughout the search, keeping reading-only stretches short.
