

B: Sinuosity @ 1.30 (strict -> less red) **B: Sinuosity @ 1.10 (loose -> more red)** **A: Angular @ 80 deg/s (strict -> less red)** **A: Angular @ 30 deg/s (loose -> more red)**

Participant 1 | Condition: Diffuse

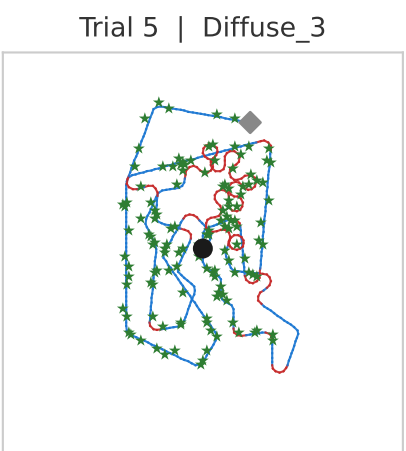

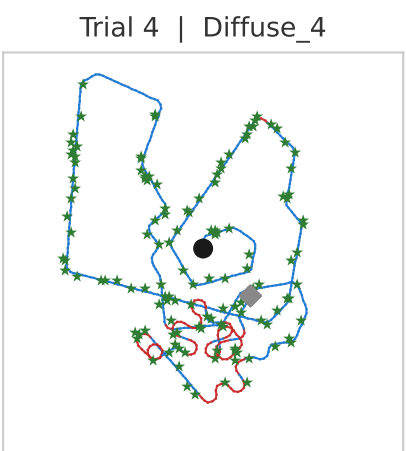

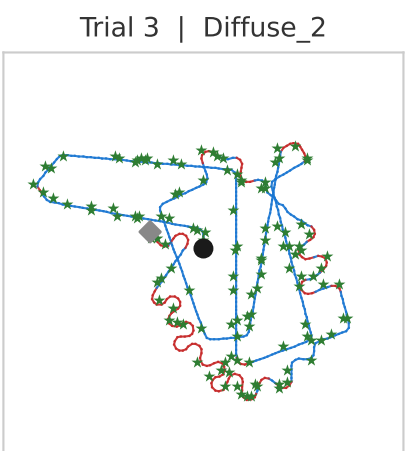

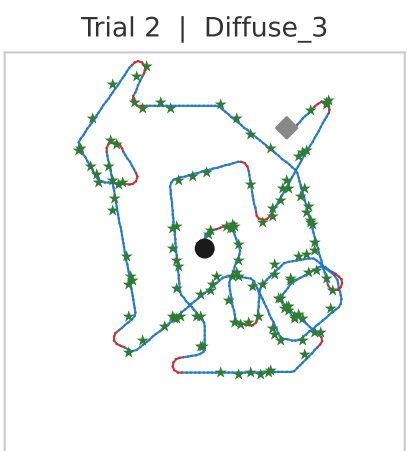

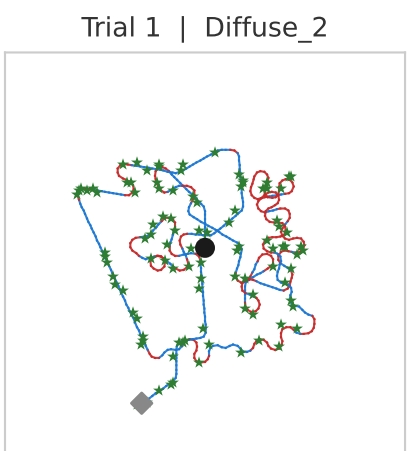

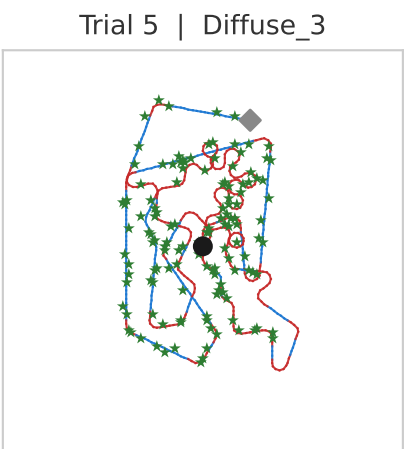

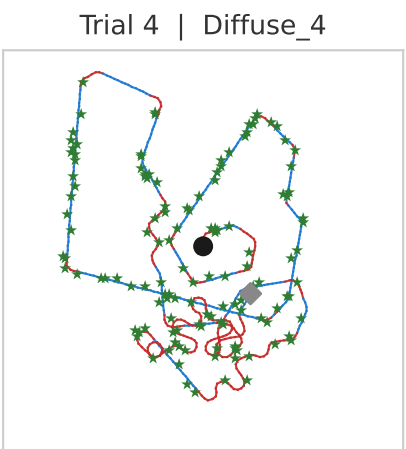

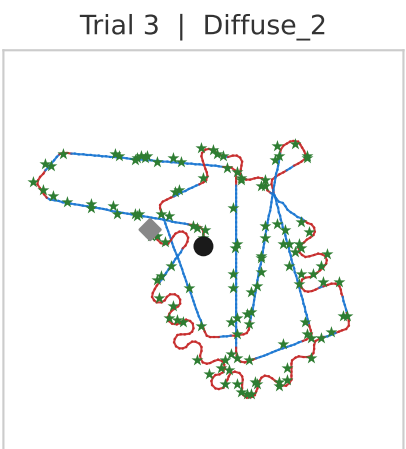

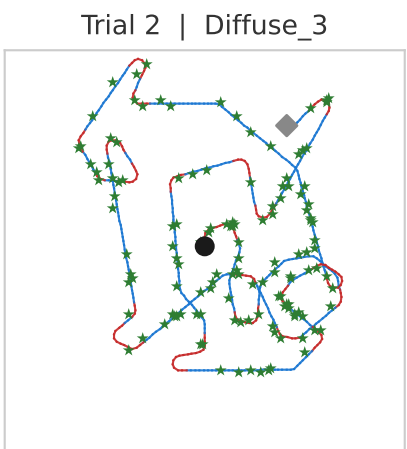

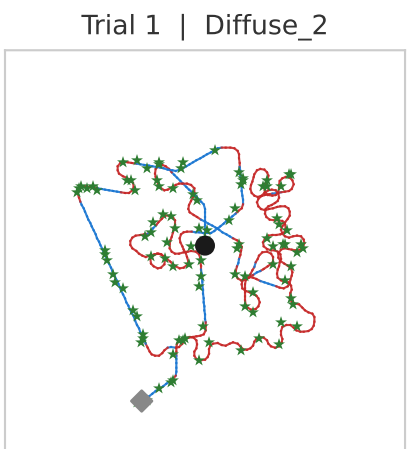

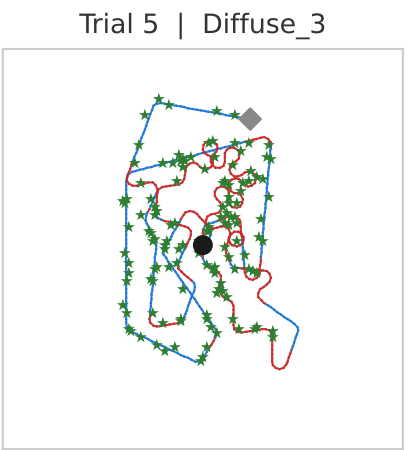

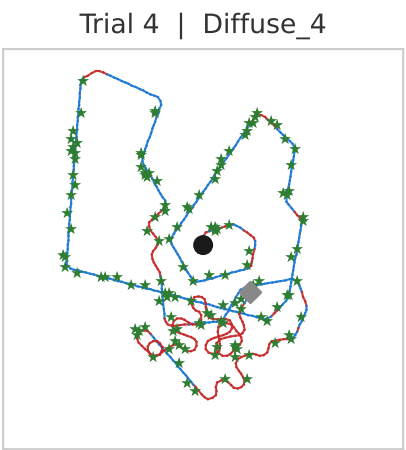

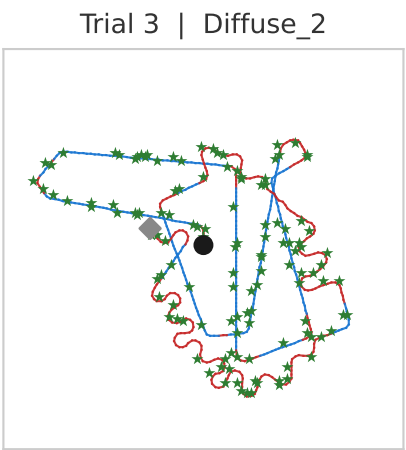

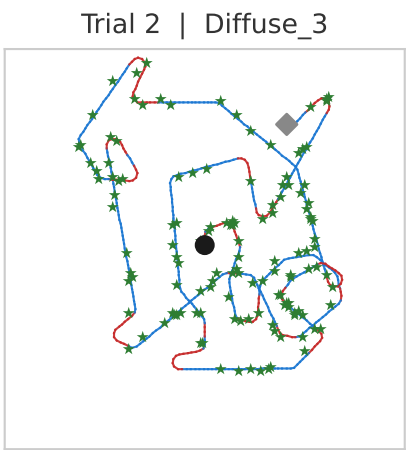

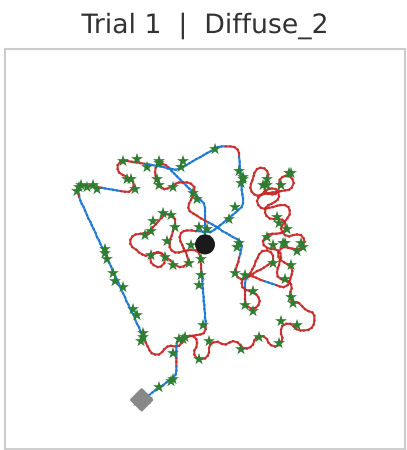

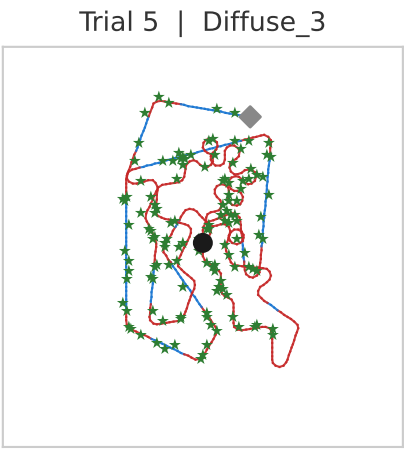

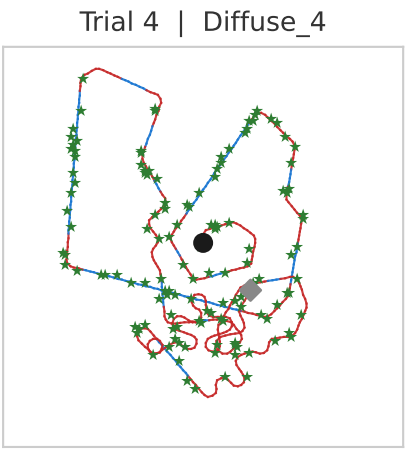

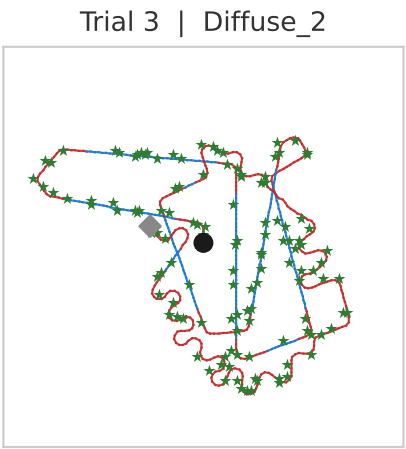

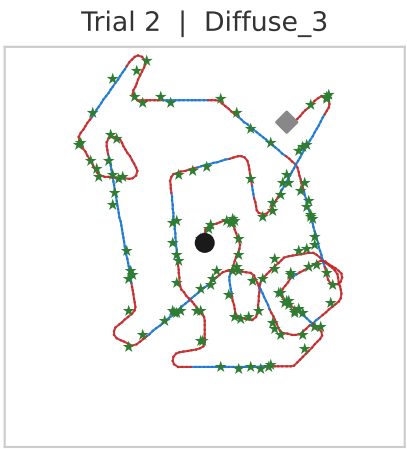

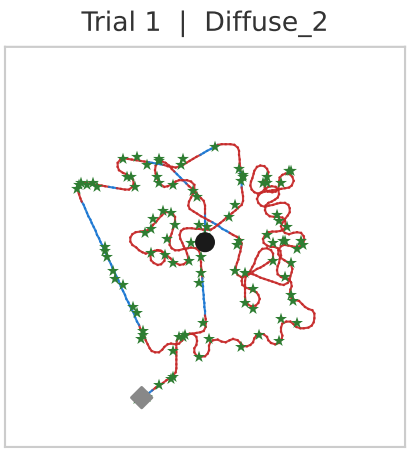

B: Sinuosity @ 1.30 (strict -> less red) **A: Angular @ 80 deg/s (strict -> less red)** **B: Sinuosity @ 1.10 (loose -> more red)** **A: Angular @ 30 deg/s (loose -> more red)**

Participant 8 | Condition: Clumpy

B: Sinuosity @ 1.30 (strict -> less red) **B: Sinuosity @ 1.10 (loose -> more red)** **A: Angular @ 80 deg/s (strict -> less red)** **A: Angular @ 30 deg/s (loose -> more red)**

Participant 13 | Condition: Diffuse

A diagram of a maze with a red path, green stars, a black circle, and a grey square. The maze is a complex, irregular shape with many internal loops. A red line traces a path through the maze, starting from the bottom left and ending at the top right. Green stars are placed along the red path. A black circle is located in the lower-left quadrant of the maze. A grey square is located in the upper-right quadrant of the maze.

A schematic diagram of a protein structure, likely a ribosome, showing a complex fold. The structure is composed of red and blue lines representing different regions. A black circle and a grey square highlight specific sites of interest.

A diagram of a closed, irregular curve. The curve is primarily blue, with several segments highlighted in red. Green stars are placed along the entire length of the curve. Inside the curve, there is a solid black circle and a solid grey circle.
